

# conda\_env

September 22, 2017

The following commands **must** be run from the terminal!!!

```
conda create --yes --name biof309 python=3.6.2
source activate biof309
conda info --envs #confirm environment
pip install --upgrade ipython jupyter notebook pandas numpy scipy matplotlib
pandas seaborn bokeh scikit-learn altair biopython
conda list #confirm all packages installed correctly
conda list > conda_list.txt #save a nice list of packages
conda list --explicit > conda_list_explicit.txt #save a detailed list of packages
conda env export > environment.yml #create an environment file
```
